Blockchain Use Case

BIODME BLOCKCHAIN

1. Innovator, manufacturer and producer initiate a smart contract to trade their products - goods, tangible, intangible and/or services in BIODME Ecosystem.
2. Surveyor/Assessor/Certifier provide assessment and /or certification
3. If necessary third party guarantor like insurance to provide protection.
4. DME tokens issued based on verified assets declaration to be sold to buyer under smart contract. Intermediate buyer need exchange FIAT currency to get DMEtokens .
5. Intermediate buyer to buy the products in smart contract for agreed quantity, quality, delivery time and delivery location at agreed price - Paid in DME.
6. The agreed goods or services will be delivered to the buyer as per smart contract in point 5.
7. On or before the delivery time, the intermediate buyer may sell the goods or services to ultimate user either in FIAT transaction or in DME Tokens.
8. In return, the intermediate buyer will receive the proceed of the sales either in FIAT or DME Tokens
9. The method of goods or services delivery agreed between ultimate users and provides.
10. The Provider deliver the goods or services at agreed quantity, quality, place and method of delivery.

The Blockchain

DME Token Lifecycle

DME Token Lifecycle

BIODME.ORG

Upon receiving verified assets declaration from innovator, manufacturer, producer and any legitimate BIODME value chain - under smart contract, Token Generation Event (TGE) trigger issuance of DME token. Users of various level then can exchange FIAT into DME to buy products - tangible and intangible under BIODME ecosystem,

When DME token holder no longer need the token to buy or pay goods and services, they can sell or exchange back the token into fiat currency. Upon exchanged back, the token will cease to operate - couldn't be traded any longer. The issuer can issue new token upon Token Generation Event (TGE) complied, i.e. new verified assets enter into the system.
